Windows and Doors Noise Reduction

Whether you are living near a busy road and have difficulty blocking out the sound of traffic, or just want more privacy in your home, there is an answer to **noise pollution**.

Ordinary windows and doors do little to reduce noise. Noise can travel through windows and doors in a variety of ways.

Frame design, seal type and glass type all play a part in reducing noise transmission.

Sound Smart™

To reduce neighbourhood, traffic and other external noise from entering your home, consider using **Sound Smart™** windows and doors.

Suncoast windows have worked closely with acoustic engineers to extensively test and develop **Sound Smart™** products.

Frame Design

The frames of **Sound Smart™** windows and doors have been designed to accommodate different types of acoustic seals and glazing options.

High Performance Seals

If a window or door is not well sealed, noise will find a way to get through. **Sound Smart™** products use superior acoustic seals in order to block air gaps and reduce vibration of the glass and frame, ensuring that noise is kept on the outside.

High Performance Glazing

High performance glass blocks sound both by reflecting noise back towards the source, and absorbing sound energy within the glass. The amount of noise reflected and absorbed can vary depending on the type of high performance glass.

+ Design and Symmetry

Flexibility by Design

Suncoast windows **Sound Smart™** products provide a high level of design flexibility. Windows and doors are available in expansive sizes and lifestyle configurations, with modern hardware and beautiful frame colours.

One Aesthetic

A feature of the **Sound Smart™** product range is its overall visual symmetry within the range and with other Suncoast windows and door products. This consistency in style and finish eliminates any visual clashes and provides a clean, consistent finish throughout a house.

Suncoast windows Sound Smart™ Solutions

Essential . Signature . Commercial

SINGLE GLAZED

DOUBLE GLAZED

COMING SOON

Ask our sales representative about
SECONDARY GLAZING

Achieve acoustic ratings up to **Rw44**

- + Sound insulating pocket between 2 sashes resulting in more sound energy being absorbed
- + High performance glazing including special acoustic interlayer within the glass absorbs more energy
